

Templates and Order Sets in LLEAP are useful once they are saved into your favorites. In order to save an item to your favorites tabs, one must search for the template or order set first.

For Order Sets, once you find one you want to make a favorite, just right click on the Order Set and make it a favorite.

For Templates, once you find the template you want to save, click add to favorites, and it should save under your favorites section when you enter into your SMARTTEXT section.

Any questions on how to do any of these please let me know.

OUTPATIENT SMARTTEXT templates to save to your favorites for this rotation:
